

## Informed Consent

I hereby request to have the experience of an MG Pulsed Magnetic Cellular Exerciser session. I understand that this unit creates a pulsed electromagnetic field of varying strengths. I affirm that I do not have an electrical implant (*pacemaker, defibrillator, cochlear implant*). I affirm that I am not pregnant. I have informed the operator of any recent surgeries. I understand that the manufacturer, marketer, its employees, distributors, agents and affiliates do not advocate this MG session on my person. I understand that a MG session is NOT a substitute for the assessment, evaluation, diagnosis, treatment, alleviation, mitigation, prevention or cure of any disease of any kind in any way. I hereby attest and affirm that I am here as a seeker of information on this or any subsequent visits, solely on my own behalf and not as an agent for federal, state or local agencies. I understand that the opinions and information shared by the demonstrator are his/her personal opinion only and is not intended as medical advice. Beyond what is stated above, I understand that other risks associated with a session are currently unforeseeable and that the demonstrator, the manufacturer, the marketer, employees, agents and affiliates cannot accept any liability for loss or damages incurred as the result of the MG session and do not guarantee or promise that I will receive any benefit from it. I understand that the MG Technology has not been evaluated by the U.S. Food and Drug Administration. I reserve the right to use the knowledge I have gained in the care of my own body in any legal manner I may choose. I have read this form and voluntarily agree to the MG session on my person assuming all liability for any and all results or consequences.

# MG-33™ and MG-PRO Pulsed Magnetic Cellular Exercisers

## *Consent for Demonstration or Session*

The MG-33 and the MG-PRO (referred to hereafter as MG) are all generators that produce a DC (*direct current*) pulsed electromagnetic field of varying strengths delivered via insulated cables. No electricity comes into contact with the body. The magnetic energy produced at the loop passes freely through living tissue for the purpose of cellular exercise to promote and support a sense of well being. It is not a medical device. It has not been evaluated by the FDA. It is not intended for the diagnosis, treatment or cure of any physical or medical condition. If you are experiencing the symptoms of a physical or medical condition, you should seek the advice of a medical professional. The manufacturer, dealers, distributors, their employees, agents or affiliates do not advocate its use. If after reading the precautions below you do not know whether a demonstration or a session of pulsed magnetic therapy is right for you, we encourage you to consult with your health care provider.

### **Precautions**

- Do not use the MG if you have an implanted electronic device including: **pacemaker, defibrillator, cochlear hearing device**
- **Remove** all the following from your person: Electronic or battery operated devices, keys, wallets, jewelry and hearing aids.
- Do not sit on a metal chair during a session.
- Do not use the MG if you are pregnant or about to become pregnant.
- Do not use during active bleeding, hemorrhaging or during heavy menstruation.

### **Cellular Exercise**

The MG has been engineered to produce extremely brief, but repetitive pulses of magnetic field energy in nanoseconds. In this form it provides supportive energy at the cellular level without generating heat. The micro movement that occurs at the cellular level is in essence a stretching and relaxing movement that alternates between the rise and fall of the pulse therefore, its reference as cellular exercise.

Depending on the strength of the pulse you will feel involuntary muscle contraction. You may experience areas of sensitivity. It is possible that with the exercise and normal cell respiration, which includes the release of toxins, you may experience mild side effects including but not limited to nausea, lethargy, headache, fatigue or muscle aches. Water is recommended before and after a session for optimal hydration.
